

Cutoff: when the event happened against when it was posted
Compare the PostingDate of the ledger rows that first record a transaction with the date of the event: the DeliveryDate of the goods a sales invoice bills, when control passes on delivery, and the work dates of the pay period a payroll pays. A first posting in a different fiscal year from the event records it in the wrong period; a later payment that settles an accrual does not.

the direction of a trace between the ledger and its documents, which link on SourceDocumentType and SourceDocumentID
