

The general ledger

GLEntry
PK GLEntryID
PostingDate
FK AccountID
Debit
Credit
SourceDocumentType
FK SourceDocumentID

Existence: ledger to documents
LEFT JOIN from GLEntry to the document table on SourceDocumentID; the postings whose document key IS NULL point to nothing

Completeness: documents to ledger
LEFT JOIN from the document table to GLEntry; the documents with no GLEntryID were never posted

Source document tables (four of many)

SalesInvoice
PK SalesInvoiceID
InvoiceDate

PurchaseInvoice
PK PurchaseInvoiceID
InvoiceDate

DisbursementPayment
PK DisbursementID
PaymentDate

PayrollPayment
PK PayrollPaymentID
PaymentDate

Cutoff: when the event happened against when it was posted

Compare the PostingDate of the ledger rows with the date of the event: the DeliveryDate of the goods a sales invoice bills, and the work dates of the pay period a payroll pays. A posting in a different fiscal year from the event records it in the wrong period.

 the direction of a trace between the ledger and its documents, which link on SourceDocumentType and SourceDocumentID
