

Manage security roles

[Close Dialog](#)

Create new security roles and use filters to define row-level data restrictions.

Roles

[New role](#)**Cost Center Managers**[Finance](#)

Tables

[Account](#)[BudgetLine](#)**CostCenter (filter)**[Customer](#)[Date](#)[Employee \(filter\)](#)[GLEntry](#)[Item \(filter\)](#)[LaborTimeEntry](#)[Security \(filter\)](#)

Rules

[Switch to default editor](#)

```
[CostCenterID] IN CALCULATETABLE (  
    VALUES ( Security[CostCenterID] ),  
    Security[UserPrincipalName] = USERPRINCIPALNAME ()  
)
```

A rule returns true or false for each row of the table; only the rows that return true stay visible to the role's members.

[Save](#)[Close](#)

The real dialog marks a table that has a rule with an icon; the mock writes the word filter. The Cost Center Managers role is selected, and its rule on CostCenter is open in the DAX editor.
