Applied steps

Source

Navigation 1

Changed column type

Choose columns

After Date is chosen on InvoiceDate's header (a step named Changed column type 1):

SalesInvoiceID	InvoiceDate
1	1/1/2024
2	1/2/2024
3	1/1/2024

Outlined: InvoiceDate, which the workbook stores as an Excel date. Power Query Online reads the number and types the column as a whole number; Power BI Desktop reads the same cells as dates. The real headers show type icons; the mock writes 123 and ABC.
