Costs | **Make or Buy** | Capacity

Outlined in teal: the three families whose decision is to buy only with the crew reduced. A positive effect means buying saves money; with the crew kept (column M) every quoted family costs money to buy, and the CFO's absorption view (column L) is positive for five of the six. Columns B to F, H, K and P to Z are hidden here, and the columns are narrower than the workbook's; the formula bar shows the rule of the decision cells, which also asks (column Y) whether the two years the quote is fixed cover the family's one-time costs.
