19	TXT-PIL	673.3	366.13	180.09	50.8%	FALSE				227.49		
20	TXT-THR	1,920.5	580.99	305.55	47.4%	FALSE				330.04		

Row 21 is blank. The totals block, rows 22 to 26, is drawn with column A widened to show its labels

22	Families below the floor	7
23	which	FUR-BKC, FUR-BNH, FUR-CTB, FUR-NGT, FUR-SDB, FUR-TBL, LGT-CHD
24	Revenue a year if volume holds	556,535
25	If the families of Requirement 6 are bought, those still below the floor	FUR-BKC, FUR-CTB, FUR-SDB, LGT-CHD
26	their revenue a year if volume holds	246,311

Growth 50% Sensitivity | **Prices** | Standards

Outlined in coral: the seven families whose margin on time-driven cost is below the 40% floor; only they have a target price, an increase, a volume they can lose and a revenue. The shaded cells of column G are Goal Seek's changing cells, and column I computes the same price directly. The increase, the volume it can lose and the revenue read column I. The volume the increase can lose is the formula in the bar: one minus the contribution per unit now, over that contribution plus the increase per unit. Columns H, K and O are hidden here (O says whether Goal Seek agrees with column I), and the columns are narrower than the workbook's. The totals read 556,535 a year if volume holds. Of the families bought in Requirement 6, three are among those below the floor, so 246,311 a year is what the other four bring.
