22	Difference as a percen…	19.1%			
23	Against the analytical f…	Above the follow-up trigger			
24	Against performance…	Below performance materiality			
25	**Conclusion**	**Investigate (Requirement 5): an unexplained difference above the follow-up trigger, below performance materiality**			

Rows 26 to 34: the expectation at the 2024 rate and the model answer

Cycle Map | Reconciliation | **Materiality** | Risks | Tests

Outlined in teal: the three threshold cells and the follow-up trigger, each with its name written beside it as a label (in the workbook the name shows in the Name Box, here that of B6); every later formula reads the name, not the cell. In blue: the expectation at the 2025 rate, the recorded returns, the difference (39,002.09, 19.1% of the expectation) and its percentage. In coral: the two comparisons and the conclusion, which says to investigate because the difference is above the follow-up trigger, a case assumption of its own and not the clearly trivial threshold, and below performance materiality. Column A is narrower than the workbook's, so a long label is cut where its neighbor's value begins.
