Receipt Lines	Receipts without a Requisition	Issue Lines	Issues without a Work Order	Requisition Count

Each pair agrees to the cent in every year. The model's materials, read through the receipt and issue lines and their items, equal the postings to account 1045 from GoodsReceipt and MaterialIssue. The two cards that count exceptions read 0: every receipt line reaches a requisition and every issue line a work order.

Report view, page Validation, filtered to the 3 years of the window; total rows are not drawn. Outlined in teal: each materials pair, the model's measure beside the ledger's postings, and the two link cards that read zero. The page's text box is not drawn.
