Days at each quarter-end, as recorded: the three components and the cash conversion cycle

2024-Q4 is the first quarter with a full twelve months, and its balances still carry the opening entry JE-2024-000001. Its receivables of 380,000.00 and payables of 2,096,371.12 have no document behind them. Without those lines DSO reads 57.4 days, not 62.2, and DPO 66.2, not 118.4.

From 2024-Q4 to 2026-Q4 DIO rose 239.9 days and the cycle 252.0, while DSO moved −7.3 and DPO −19.5: the cycle grew through inventory. Each line is a quarter-end balance over its own ledger flow of the twelve months before, times 365; the shaded quarter is the first. DPO's fall from 118.4 comes mostly from the unsupported opening payables diluted by purchases (66.2 without them).
