Materials above the target at the end of fiscal 2026, and the fall in cash of the year (dollars)

The excess is the stock of raw materials and packaging at the year-end, 11,751,653.92, less what a target of 28, 60 or 90 days of supply allows at the year's rate of issue, 10,161,204.64 a year: 779,489.67, 1,670,335.01 and 2,505,502.51. Even at 90 days the excess is about ten times the year's fall in cash. Every bar starts at zero; the months are the excess over a month of issues. An estimate at the year's rate of issue, not a forecast of what could be released.
