
Does the column identify the rows of its own table?
Yes
Primary key
identifies each row of its own table
SalesOrder
PK SalesOrderID
No
Does it hold the key values of another table?
Yes
Foreign key
holds the key values of another table
SalesOrder
FK CustomerID
then ask
Does the same column reach into another table group?
No: it stays an ordinary foreign key, inside its own table group.
Yes
Bridge key
a foreign key across table groups
SalesOrderLine
FK ItemID
ItemID in SalesOrderLine reaches Item, in Master Data.
No
Does the meaning of its value depend on another column?
Yes
Logical reference, not a key
read together with SourceDocumentType
GLEntry
SourceDocumentType
SourceDocumentID
The dashed amber leaf is the source-document trace: its two columns work as one.
No
An ordinary column
it describes the row
A question to ask of the column
The role it plays
The source-document trace: a logical link that analysts test
