SalesInvoice | SalesOrder | **Ex 5.2**

NumberYearMatches is FALSE: the number year differs from the date (6 invoices)

BeforeOrder is TRUE: dated before the order (3 invoices)

Row 2 and row 7 are blank, and the four counts sit above the list. The two outlined groups share no invoice, so together they list the 9 invoices that Tutorial 2.1 found, which are typed below as values with the first shipment date of each order: each test finds only part of them. Every flagged invoice is dated before its first shipment.
