A calculated field
Quantity*UnitPrice

Line	Quantity	UnitPrice
A	2	10
B	3	20
C	5	30
Sum	**10**	**60**

Sums first, multiplies last.
Sum of Quantity × Sum of UnitPrice = 10 × 60

600: wrong
No line was multiplied; the result is not the revenue.

A custom column in the source
LineAmount = Quantity*UnitPrice

Line	Quantity	UnitPrice	LineAmount
A	2	10	20
B	3	20	60
C	5	30	150
Sum	**10**	**60**	**230**

Multiplies first, sums last.
2 × 10 + 3 × 20 + 5 × 30 = 20 + 60 + 150

230: correct
Each line was multiplied, then the PivotTable added the products.

An illustration with three invented lines, not Charles River values. A calculated field is evaluated on the totals of the fields it names. Tutorial 6.2 adds StdCostAmount to the source for that reason.
