The volume lift at which the promotion breaks even, by discount rate

From the Model worksheet's inputs: 4,823.89 units on the promotion's lines, $613.72 price before discount, $346.36 variable cost and a commission rate of 1.90%. The break-even lift is the lift at which the contribution with the discount equals the contribution without it; fixed costs do not enter. At the 10% discount the Furniture units ordered in the promotion's months were +0.7% against the other months.
