Outlined: the cell nearest the model's own ratio and fixed costs

Selected: D3, which holds =B24, the break-even revenue with the added items (19,959,700). Outlined: the cell for 45% and 9,000,000, the nearest to the model's own ratio (45.0%) and fixed costs (8,979,457); it reads 20,000,000. The table is built with B9 as the row input cell and B23 as the column input cell, and every grid cell is the one array formula {=TABLE(B9,B23)}. Columns A to C hold the model and are not shown.
