OpenInvoices | **Aging** | LedgerAR | AR Details | AR by Source

Selected: E4, whose formula is in the bar and is copied to E8. Outlined: the expected credit loss, $34,106.25, which is 0.77% of the open balance of $4,418,804.32 (coral), and the LossRate column the exercise adds to the Buckets Table, typed as decimals and formatted as percentages (teal). Rows 11 to 13 are the reconciliation of Tutorial 8.2: the opening line of $380,000.00 is in neither the aging nor this estimate.
