12		
13	The opening balance entry credited accounts payable with $2,096,371.12 on the conversion date, with no supplier invoices behind it. No payment has ever been applied to it (every payment pays an invoice). The same entry debited cash with exactly $2,096,371.12, a coincidence worth a question. Unsupported, like the opening receivables of Tutorial 8.2.	The ledger, unless the conversion-date supplier detail supports it
14	Debt Reclass entry: the note-financed capital invoice V0005-2024-003160 ($360,000.00) was moved from 2010 to 2110 Notes Payable when a note financed it. No supplier payment will ever settle it, so it stays open in the invoice detail.	The invoice detail: close or flag the invoice as settled by the note
15	Debt Reclass entry: the note-financed capital invoice V0005-2026-021692 ($280,000.00) was moved from 2010 to 2110 Notes Payable when a note financed it. No supplier payment will ever settle it, so it stays open in the invoice detail.	The invoice detail: close or flag the invoice as settled by the note

Ex 8.1 | **Ex 8.2** | Ex 8.2 JE Rows | Ex 8.2 Pivot | OpenPayables

Rows 11 to 18 of the Ex 8.2 worksheet in two views, columns A to F and then G and H. Selected and outlined: F18, whose formula is in the bar, the unexplained difference of zero. The three reconciling rows are the opening entry, a negative amount, and the two Debt Reclass entries, positive amounts, because the invoice detail still shows those invoices as open. PurchaseInvoiceID is read from each entry's description.
