

Before any total over a join, ask at what level each amount is recorded. A header amount repeats on every line it is joined to: the year's GrandTotal sums to $59,100,114.91 over the join of invoices to lines, against $31,919,124.42 from SalesInvoice alone, and supplier 1's invoices joined to its payments return 152,880 rows. Sum the line's own column, or total each table in a derived table before joining. *Practiced: Tutorial 10.3, Step 6; Exercise 10.6 (2).*

Blue boxes ask the question; teal boxes give the join or summary that fits, the row-count test that checks it and where the chapter practices it.
