Ex 11.3.sql

```
25  Ranked AS (
26      SELECT ItemGroup, ItemCode, ItemName, UnitMargin, MarginPct,
27          RANK() OVER w AS MarginRank,
28          DENSE_RANK() OVER w AS MarginDenseRank,
29          ROW_NUMBER() OVER w AS MarginRowNumber
30      FROM Margins
31      WINDOW w AS (PARTITION BY ItemGroup ORDER BY MarginPct DESC)
32  )
33  SELECT ItemGroup, ItemCode, UnitMargin, MarginPct, MarginRank,
34      MarginDenseRank, MarginRowNumber
35  FROM Ranked
36  ORDER BY ItemGroup, MarginRank;
```

	ItemGroup	ItemCode	UnitMargin	MarginPct	MarginRank	MarginDenseRank	MarginRowNumber
57	Furniture	FUR-CON-0032	974.49	55.5	1	1	1
58	Furniture	FUR-CON-0063	630.55	55.5	1	1	2
59	Furniture	FUR-CTB-0027	469.83	55.4	3	2	3
60	Furniture	FUR-TBL-0079	306.75	55.2	4	3	4
61	Furniture	FUR-SDB-0012	435.41	55.1	5	4	5
62	Furniture	FUR-DSK-0016	336.08	55.0	6	5	6
63	Furniture	FUR-CON-0023	502.21	55.0	6	5	7
64	Furniture	FUR-SDB-0050	292.02	55.0	6	5	8
65	Furniture	FUR-BNH-0058	386.47	55.0	6	5	9
66	Furniture	FUR-TBL-0072	645.46	55.0	6	5	10

Execution finished without errors.
Result: 223 rows returned
At line 17:
WITH Margins AS (

Outlined: the WINDOW line, the one change from the model script (MarginPct in place of UnitMargin), and the run of five Furniture items at 55.0%: all share RANK 6 and DENSE_RANK 5, while ROW_NUMBER counts 6 to 10, in an order the query does not control. The top two items tie as well, at 55.5%. Over the 223 items the three columns disagree on 183, and RANK keeps 16 rows for the top three where ROW_NUMBER keeps 15. The grid is scrolled to rows 57 to 66, the first rows of Furniture, and the editor to the Ranked CTE.
