Cumulative share of the year's manufacturing overtime, employees ranked from the highest total

64 employees recorded 20,030 hours of manufacturing overtime by work date. The curve stays within 1.6 points of the diagonal: the five largest totals hold 8.4% (an even spread would give 7.8%) and the ten largest 16.6% (15.6%). A concentrated pattern would rise steeply and pass one half within a handful of names.
