2/20/2024 12:00:00 AM	Settled

Column profiling based on entire data set

Profile_Invoices with Column quality and Column distribution on. Outlined: the empty share of PaymentDate, and the number of distinct values of Status (Settled, Partially Settled and Submitted on the entire data set; Settled alone in the first 1,000 rows). The first rows are the earliest invoices, nearly all paid. The preview shows two of the table's columns and is the same on both bases, and the distribution is drawn for Status only, although the editor draws it under every column.
