Furniture gross margin, 2026-Q3 to 2026-Q4: from Margin PQ to Gross Margin

Margin PQ	**Volume effect**	**Mix effect**	**Price list effect**	**Promotion effect**	**Gross Margin**
Gross Margin of 2026-Q3, the quarter before	change in units × margin per unit of the prior quarter	units × change in list margin per unit	−units × change in the cut from list price to the price before discounts	−units × change in discount per unit	of 2026-Q4: Margin PQ plus the four effects; Bridge Check is the difference, 0.00

Margin (start and end) Increase, with a plus sign Decrease, with a minus sign

Furniture, 2026-Q4 against 2026-Q3. The vertical axis starts at 1,650,000, not at zero, so that the three small steps show; the two blue bars are cut near the base. Volume, mix and price lists together add 5,640.95, and the promotion effect takes away 120,687.02, more than the whole decline of 115,046.07. No cost effect is drawn: each item has one standard cost, so a unit's cost changes only through the mix of items, and the mix effect already holds it.
