**YTD**, a visual calculation: RUNNINGSUM ( [Net Income] )
**Net Income YTD**, a measure: TOTALYTD ( [Net Income], 'Date'[Date] )
Over the twelve months of one year they read alike in every row and reach 4,503,611.24 in December.

**Filtered to July to December (requirement 3)**

**With January to June filtered out**, YTD starts again at July and reaches 2,150,939.31 in December, the sum of the six rows it can see. Net Income YTD reads the model's dates, so it shows 2,467,193.90 in July and 4,503,611.24 in December.

*Report view, page Ex 15.2, filtered to 2026. Outlined in teal: the two year-to-date columns, equal in every month. Outlined in coral: the December cells of the second table, where they differ. YTD and Change are visual calculations, computed inside the visual: the project cannot read them, so the cells show the running sum and the difference from the row above. January's Change, which has no row above it, is left empty: the project does not hold what Desktop shows there. Total rows are not drawn, and neither is the page's text box.*
