| 20 | 73.8% |

**The cards follow the slider.** Discount Value is the slider's value, 12, and Break-even Lift is the contribution a unit earns without the discount over the contribution it earns with it, less one: $192.32 ÷ $143.32 − 1 = 34.2%.

**The table does not.** Each of its rows carries its own discount, so the page sets the slider's interaction with the table to None (Format > Edit interactions). Without that, the slider would cut the table to one row.

**5 percent** needs 11.9%, about the largest lift measured in any promotion's months (+11.9%): the evidence of Requirement 5.

**12 percent** needs 34.2%: the card's value, and the lift of the Part II case.

**One promotion, one year.** The three unit cards are scoped by name to the Design Trade Customer Promotion and to 2026, 88 invoice lines.

*Report view, page Ex 15.4, with the slider at its default of 12. The slider is drawn as a track with one handle; Desktop draws its own. The table lists every whole discount from 0 to 20, each carrying Break-even Lift. Outlined: the five discounts of Requirement 4. Total rows are not drawn, and neither is the page's text box.*
