Proved by the Checks tab	
Tutorial 16.1 The five flag counts, the entries and their amounts at each risk score, the eight entries that score 2 or more, the entries by year and by approver, the ledger lines of the top entry, and Test 1	**44** rows
Tutorial 16.2 The flags of the orders and registers, the register's rows and their keys, each test's exceptions and rate per 1,000, every month's count, the approvers, and the exceptions and rates of each process and year	**105** rows
Tutorial 16.3 Test 3's key counts, the dispositions by kind, the open exceptions by process and year, the documents that fail two tests or more, Test 4's orders and registers, and Data Through with each year selected	**34** rows
Exercise 16.1 The open invoices, balance and customers, the five buckets, the largest balance over 90 days, account 1020, the difference and its source, and the credit balances	**15** rows
Exercise 16.2 Both cutoff tests by year, their subtotal and standard cost, the rows of the copied register and of Tests 16.2, and the extra invoice's posting and year	**13** rows
Exercise 16.3 The surge days in all and by year, the first day, the employees and hours of the surge entries, and each year's surge overtime, share and overtime on other days	**21** rows
Exercise 16.4 Exceptions, population and both rates for each process and year; the unexplained rate with a test selected and the total row's rate, both blank	**38** rows
Exercise 16.5 The payments, full and partial, the deviation of each group and of all payments, and the payments whose first digit is 0 or whose text begins with 0	**12** rows
Exercise 16.6 The pairs, those within 30 days and on the same invoice, and the orders, entries and registers approved by the Chief Financial Officer, the Controller and the Accounting Manager, with their shares	**16** rows

Visible only in Desktop

The heat map's shading The Checks tab proves the count in each cell of the Monitoring matrix, but not the rule colors that make January darkest, or that the number stays in every cell
Tutorial 16.2, Step 11

The drill-through click The right-click that opens Entry Lines or Exception Detail, and the filters the click passes: the page's rows come from the cell, not from a measure
Tutorial 16.1, Step 10; Tutorial 16.2, Step 13

The edited interactions as a reader meets them The project saves a click on an approver or on the heat map as None for the rates table and the Data Through card, and Exercise 16.5's slicer as None for its table. Only a click shows that they hold
Tutorial 16.2, Step 12c; Tutorial 16.3, Step 7c; Exercise 16.5, Step 4d

The Data Through card under a slicer The Checks tab proves the date with each year selected (2024-12-20, 2025-12-19, 2026-12-18), but not that the card on the page follows the Year slicer and ignores a click
Tutorial 16.3, Step 7

The Power Query step names a student chose The project's steps carry Desktop's names. A student's queries are read in the file, because the Checks tab tests the model and not how it was built
Tutorials 16.1 to 16.3; every exercise

The Checks tab of the model answer holds 298 rows, a section for each tutorial and exercise. Choose Home > Refresh, then Run. A row is proof of a value, not of how a visual looks: the right-hand column is for the instructor to open the pages.
