

A test by invoice date finds nothing here. It compares the year of the delivery with the year of the invoice. SI-2026-013742 is dated 2025-12-04 and delivered 2025-12-10: both fall in 2025, so no year differs.

A test by posting date would find it. It is posted 2026-01-01, in 2026, a year after the delivery. Chapter 12 counts it among the 8 invoices of January 2026; the exercise's test, by invoice date, counts 7.

The four dates of SI-2026-013742, to scale from December 2025 to the first days of January 2026. The year-end falls between the delivery and the posting. It is Chapter 6's revenue cutoff error: revenue recorded in the year after the goods shipped. Each date is read from the dataset.
