Exceptions of fiscal 2026, three ways of counting them, by process

All: every exception of the process in the year

Unexplained: the Expected exceptions and the recurring test PR SelfApproved set aside, as in Unexplained Rate per 1,000

Open: the exceptions with no disposition, as Open Exceptions counts them

The register's counts for fiscal 2026. Payroll: 26 of its 28 exceptions are the recurring test, open but not unexplained, so the unexplained bar is 2. Purchase orders: the three counts are 8, 8 and 7, because no purchase order exception is expected and only one is reviewed. The bars are counts, not rates; the rates divide each process's exceptions by its own documents.
