Hours by work center, fiscal 2026

Each group is one work center of the calendar; the three bars are its hours available in the year, its practical capacity at the share of the available hours the case assumes, and the routing time the year's completions needed (run hours per unit times the units, plus the setup of each work order). The plant used 71.6% of its practical capacity; Quality Assurance's bar for routing time is the smallest by far.
