C44 | *fx* | {=TABLE(B5,B6)}

	A	B	C	D
	Rows 1 to 3: the title and the method of the sheet			
4	**Sensitivity inputs (the two-way Data Table below changes them; they stay at 0% and 100%)**			
5	Quote adjustment	0%		
6	Share of the freed crew time actually removed	100%		
	Rows 7 to 39: the table of the six families, the Goal Seek block and the summary of the families to buy			
40	**Two-way Data Table: the families above together, with the quote 10% either side (across) and the share of the freed crew time removed (down)**			
41	+255,481	-10%	0%	+10%
42	0%	-35,263	-334,636	-634,009
43	50%	+259,796	-39,578	-338,951
44	100%	+554,854	+255,481	-43,892
	Rows 45 to 56: the materials the families draw and the model answer			

Costs | **Make or Buy** | Capacity

Outlined in teal: the two input cells, B5 (the row input, across) and B6 (the column input, down), which sit on this sheet because a Data Table's input cells must. In blue: the corner cell A41, the sum of column V over the families to buy (FUR-BNH, FUR-NGT, FUR-TBL). In coral: C44, all the crew time removed at the quote as it is, which equals the annual effect of buying them with the crew reduced, 255,481; the row of none removed, C42, is the 334,636 they cost with the crew kept, shown with a minus sign. Every grid cell is the one array formula {=TABLE(B5,B6)}, shown in the bar.
