	A	C	D	E
4	**Item**	**2024**	**2025**	**2026**
	Rows 5 to 54: each population reconciled to the ledger by year, with the year-end closes excluded			
55	**Account 2060 Customer Deposits and Unapplied Cash, rolled forward (credit balance positive)**			
56	Opening balance	0.00	3,105.75	1,008.67
57	Receipts held (credits from CashReceipt)	24,574,608.36	31,633,933.20	31,688,081.73
58	Applied to invoices (debits from CashReceiptApplication)	-24,574,608.36	-31,633,933.20	-31,688,081.73
59	Credits on paid invoices (credits from CreditMemo)	48,134.50	84,484.77	87,512.61
60	Refunds paid (debits from CustomerRefund)	-45,028.75	-86,581.85	-85,107.82
61	**Closing balance, rolled forward**	**3,105.75**	**1,008.67**	**3,413.46**
62	**Ledger balance of 2060 at the year-end**	**3,105.75**	**1,008.67**	**3,413.46**
63	**Difference, rolled forward less ledger**	**-0.00**	**-0.00**	**-0.00**
	Rows 64 to 98: the items in 2060 at each year-end, the reconciliation of 2034, the exclusions and the model answer			

Documentation | Cycle Map | **Reconciliation** | Materiality | Risks

Outlined in teal: the four flows through 2060, the receipts held and the applications to invoices, each about 32 million a year, then the credits on paid invoices and the refunds, tens of thousands. In blue: the closing balance rolled forward and the ledger's, a few thousand dollars at most (3,413.46). In coral: the difference, which Excel shows as -0.00 because each cell is a floating-point residue far below a cent; the model answer tests it with ABS(x)<0.005. The opening balance of each year is the closing balance above it (D56 is =C61). Columns B (Source, empty in this block) and F (Total) are hidden, and column A is narrower than the workbook's.
