

Account 1090 in fiscal 2026, one row per source

SourceDocumentType	Debit	Credit
JournalEntry	2 1,612,535.69	0.00
PayrollSummary	1 3,815,397.14	0.00
ProductionCompletion	0.00	3 3,266,422.54
WorkOrderClose	311,526.62	2,470,664.65

The same postings, one column per source

FiscalYear	Payroll	JournalEntries	Completions
2026	3,815,397.14	1,612,535.69	3,266,422.54
	1	2	3

1 **Payroll** = SUM(CASE WHEN SourceDocumentType = 'PayrollSummary' THEN Debit ELSE 0 END)

2 **JournalEntries** = SUM(CASE WHEN SourceDocumentType = 'JournalEntry' THEN Debit ELSE 0 END)

3 **Completions** = SUM(CASE WHEN SourceDocumentType = 'ProductionCompletion' THEN Credit ELSE 0 END)

Each CASE passes the amount of one source and zero for every other row, so each sum collects one source. The WorkOrderClose rows meet no condition and add zero to every column.
