Total	**101,237**	**3,344,393.44**

3,344,393.44

Labor Cost

Model answer

(2) The role's script, as TMDL view's Apply leaves it, is the TMDL view tab Ex B.1: the role's tablePermission rules are kept, and …

(3) As the Production Manager (View as, Other user employee004@charlesriver.example, role Cost Center Managers), the table on this page fails: …

(4) Performance analyzer durations vary by machine and from run to run. The role's filters can lengthen them, and the fewer rows the role leaves can …

(5) Row-level security restricts rows, not columns: the managers must see the plant's employees and their hours, so the rows stay and only the column is …

Plant | **Ex B.1** | Ex B.2 | +

Report view, page Ex B.1, viewed as the Finance role, which has no rules and no column permission. The table is filtered to fiscal 2026: three job titles have manufacturing hours, and the other four have labor time that is all non-manufacturing, so their hours are blank and their cost is $382,650.93. The total row and the card agree on $3,344,393.44. The text box is the model answer's note, cut to a few lines of each paragraph.
