Model answer

(2) The role's script, as TMDL view's Apply leaves it, is the TMDL view tab Ex B.1: the role's tablePermission rules are kept, and …

(3) As the Production Manager (View as, Other user employee004@charlesriver.example, role Cost Center Managers), the table on this page fails: …

(4) Performance analyzer durations vary by machine and from run to run. The role's filters can lengthen them, and the fewer rows the role leaves can …

(5) Row-level security restricts rows, not columns: the managers must see the plant's employees and their hours, so the rows stay and only the column is …

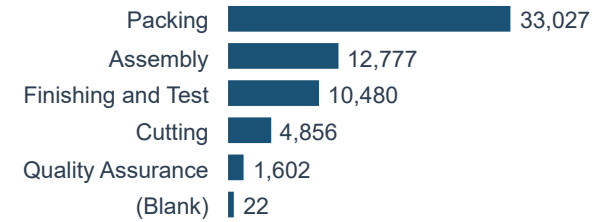

Plant | **Ex B.1** | Ex B.2 | +

Inset: the Plant page, same view

1.51
Hours per Standard Hour TTM

1.18
Hours per Standard Hour 2024

Direct Hours by WorkCenterName, 2026

A correct failure. Only the table and the card, the visuals that read Labor Cost, fail. The text box and the Plant page do not: no measure on the Plant page reads the cost, so its cards and charts still show hours: 1.51 hours per standard hour on 101,237 manufacturing hours of the year, 62,764 of them direct.

Report view, page Ex B.1, with the bar above the page naming the user and the role Cost Center Managers. The message is the engine's, as the model answer's note records it; Desktop's own wording around it is not verified. Inset: the model answer's Plant page, as the book draws it; direct hours by work center add to 62,764 of the 101,237 hours, because indirect time (38,473) has no work center.
