

Hours needed are the 2026 output of 68,913 standard hours times each scenario's ratio. Regular capacity is 64 hourly employees × 8 hours × 256 working days of 2026, because the calendar stops early in 2027. Every scenario fits inside it on the year's total, so the plan allows no routine overtime. Weeks and work centers can still bind, so any exception is approved against a dated plan.
