The memo: no more than two pages, to the CFO and the production manager

1. **The finding that changes the question**
   On the routings the plant leaves more hours unused than buying would free, so fitting the crew to the work, week by week, is the larger question.
   Requirements 3, 4 and 7

2. **The two views of the cost**
   The CFO is right that the products cost more than their standards say; the production manager is right that idle capacity belongs to the plant.
   Requirement 4

3. **Each decision with its condition**
   Make, buy only with a committed plan to reduce the crew, or raise the price, with the decision table of every quoted family and every family below the floor.
   Requirements 6 and 8

4. **The whole paths compared**
   Make and reprice against buy and reprice the rest, with the one-time costs shown.
   The Memo sheet and Requirement 8

5. **The prices**
   New, approved price lists with end dates for the families below the floor.
   Requirement 8

6. **The standards and the statements**
   A rate on normal capacity for inventory, and the evidence the base year's statements need before anything is restated.
   Requirement 9

7. **The production manager's decision**
   Whether, and how fast, to reduce the crew to the work the plant has: left to the production manager.

The appendix: no more than three pages

Exhibit 1
The family costs under the three views

Sheet: **Costs**

Exhibit 2
The make-or-buy table, with the break-even quotes and the two-way table

Sheet: **Make or Buy**

Exhibit 3
The capacity, price and standards results

Sheet: **Capacity** **Prices** **Standards**

Each exhibit is cited in the memo by name and supports a number the memo states. The decision table of the Memo sheet goes with the memo, in its third section.

Left: the seven sections of the model memo in their order, each with the requirements that supply its evidence. Right: the appendix, one exhibit to a page, each tagged with the sheet of Make Buy Reprice.xlsx it comes from.
