Missing Values

Charles River: Shipment table (Order-to-Cash)

ShipmentNumber	ShipmentDate	FreightCost	TrackingNumber
SH-2024-000028	2024-01-15	$189.01	TRK202400000028
SH-2024-000029	2024-01-16	$35.31	**(blank)**
SH-2024-000049	2024-01-21	$106.73	**(blank)**

Completeness problem: TrackingNumber is blank, so the extract holds no carrier reference for these shipments.

Duplicate Records

Charles River: PurchaseInvoice table (Procure-to-Pay)

SupplierID	InvoiceNumber	InvoiceDate	GrandTotal
2	**V0002-2024-000182**	2024-02-29	$4,152.60
2	**V0002-2024-000182**	2024-03-04	$3,454.20
2	V0002-2024-000204	2024-03-17	$950.16

Potential duplicate: The same supplier invoice number is recorded twice, with different dates and amounts. This is a duplicate-payment risk that requires investigation.

Inconsistent Values

Charles River: Shipment table (Order-to-Cash)

ShipmentNumber	ShipmentDate	Status	DeliveryDate
SH-2024-000001	2024-01-03	Delivered	2024-01-08
SH-2024-000004	2024-01-06	**In Transit**	2024-01-10
SH-2024-000038	2024-01-18	**In Transit**	2024-01-20

Possible consistency problem: Still marked In Transit, with a DeliveryDate years before the year-end under review. If that date records the delivery, the two columns disagree. If it is only the expected date, the shipments are overdue.

Outliers

Charles River: Shipment table (Order-to-Cash)

ShipmentNumber	WarehouseID	FreightCost
SH-2024-000001	2	$98.03
SH-2024-000002	1	$152.57
SH-2024-000003	2	$248.92
SH-2026-008319	2	**$873.95**

Outlier: A FreightCost of $873.95 is several times the average shipment (about $150). It may be a legitimate large or rush shipment, so investigate before treating it as an error.
