Finding	Accuracy	Completeness	Consistency	Timeliness	Error, judgment or by design
Tutorial 2.1: the Order-to-Cash and Item tables					
Blank tracking numbers Shipment, TrackingNumber (Step 2)		**tested**			! **Error** evidence should exist
In Transit after the delivery date Shipment, Status and DeliveryDate (Step 3)			**tested**	also touches	? **Judgment** conflict, or overdue
Invoice dated before first shipment SalesInvoice, InvoiceDate (Steps 6, 7)	**tested**				? **Judgment** confirm terms, cutoff
Customers that share a name Customer, CustomerName (Step 4)	also touches		**tested**		? **Judgment** compare the records
Freight costs far above the average Shipment, FreightCost (Step 5)	**tested**				? **Judgment** ask what shipped
Blank list prices Item, ListPrice (Step 8)		**tested**			✓ **By design** the items are bought
Tutorial 2.2: the Accounting Core					
Ledger rows with no amount GLEntry, Debit and Credit (Step 7)	**tested**		also touches		? **Judgment** investigate and explain
Small first and last periods GLEntry, FiscalPeriod (Step 6)		also touches		**tested**	? **Judgment** check the extract scope

tested The dimension the test examines. also touches A second dimension the finding also touches.

! Error: a genuine problem to correct or explain ? Judgment: decide on evidence ✓ By design: expected, record it

Four of the eight findings touch two dimensions, so name the one the test examines and add the second when it applies. The In Transit rows conflict only if DeliveryDate records the actual delivery, and are overdue if it is expected. The small periods look like missing transactions (completeness), and sit at the edges of the extract (timeliness), which explains their size without showing that the records are complete. The counts are in the tutorial guides.
