SalesInvoice | SalesOrder | Ex 5.3 | **Ex 5.4**

Rows 1 and 2 are scrolled out of view. The average lag, per invoice, is above the median: a minority of invoices come much later than their orders. Outlined: the promotions whose recorded dates do not span their orders (promotion 1 lasts one day; promotion 4 ends before it starts; promotion 7 ends before it starts); every line of them falls after the end date, so the 100 percent says nothing about billing. The other 6 promotions have between 28% and 50% of their lines invoiced after the end date.
