The ties at 2026-12. The matrix reads debits less credits and totals 0.00. Assets 39,328,524.11 equal liabilities 13,896,428.43 plus equity 20,928,484.44, their signs reversed, plus the year's net income 4,503,611.24. Revenue and expense together read -4,503,611.24, so that net income is their balance with its sign reversed.

Reading the second matrix. Balance is the pre-closing balance sheet. At this year-end Balance with Closes is the post-closing one, because the ledger holds the year's closes: revenue and expense read zero and the year's income sits in equity. Balance on GL Amount leaves every close out, so income never reaches equity and revenue and expense hold all three years.

Report view, page Ex 14.1, with the slicer on 2026-12 and the rows of the first matrix expanded. Outlined in the first matrix: the total, zero. Outlined in the second: the three rows where the measures disagree. Equity reads -20,928,484.44, -25,432,095.68 and -10,683,821.46 in the three columns, and revenue and expense together -4,503,611.24, 0.00 and -14,748,274.22.
