Workpaper	Journal entry tests, fiscal 2024 to 2026
Objective	Identify journal entries with characteristics of management override (AS 2401) for follow-up.
Source	CharlesRiver.xlsx: Tables T2_JournalEntry, T74_Employee, and T1_Account (queries JournalEntries, Employees, and Accounts) and T3_GLEntry (query JournalLines); all 851 entries posted in fiscal 2024 through 2026.
Population check	851 entries; their TotalAmount agrees with the debits of the ledger's JournalEntry lines.
Procedure	Entries by creator and type; five flags on each entry (weekend creation, created after the posting date, same creator and approver, above the approver's limit, round thousands); RiskScore is their sum.
Parameters	Weekend: WEEKDAY(CreatedDate,2)>5. Limit: Employee MaxApprovalAmount of the approver. Round: MOD(TotalAmount,1000)=0.
Results	33 entries flagged: 25 with one flag, 7 with two, and 1 with four.
Exceptions and disposition	Expected patterns, with the evidence still to examine: weekend depreciation at month-ends (agree to the schedule), year-end closes above every recorded limit (request the closing-entry policy), asset disposals at original cost (agree to the register). Follow up: the opening entry, the backdated entries, the self-approved entries, and the two debt reclasses. Details on the Dispositions worksheet.
Conclusion	The approval of opening and recurring entries needs follow-up before a conclusion on the control can be reached.
