

-- The ten largest variances of fiscal 2026	A comment says what the query answers. It is ignored when the query runs.
SELECT WorkOrderCloseID, CloseDate, ROUND (OverheadVarianceAmount / TotalVarianceAmount, 2) AS OverheadShare	The columns to return, including a calculated column with an alias.
FROM WorkOrderClose	The table the rows come from.
WHERE CloseDate BETWEEN '2026-01-01' AND '2026-12-31'	The condition a row must meet to be kept: the closes of fiscal 2026.
ORDER BY TotalVarianceAmount DESC	The sort: the largest variance first.
LIMIT 10;	How many rows to keep, and the semicolon that ends the statement.

The clauses must be written in this order. Only SELECT is always required; the others appear when a query uses them.
